

**The Extrusioneers** 

# Complete screws in Reiloy quality.

For processing thermoplasts, duroplasts, and elastomers for extrusion and injection molding. We manufacture most varied screw geometries with our state-of-the-art production lines.

With our technical expertise and experience, we design screws specifically for improving the efficiency of your production processes and applications or manufacture completely according to your drawings.

# Armoring alloys for screws with armored flights

Screw diameter Length Surface coating

Design

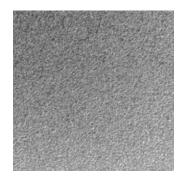

40-300 mm max. 9000 mm ion-nitrided or hard chrome plated Screw blank ready for installing according to drawing or Reiloy geometry design

### Iron-based armoring alloys

| RC3  | Highest wear protection with good<br>corrosion resistance  |
|--|--|
| Hardness at room temp.<br>Main alloy components<br>Microstructure descr. | min. 56 HRC<br>V, Cr<br>Martensitic iron-based alloy with<br>primary vanadium monocarbide<br>(VC) precipitate as well as Cr <sub>7</sub> Cr <sub>3</sub><br>chromium carbides. |
| RC5  | Highest wear protection with very<br>good corrosion resistance   |
| Hardness at room temp.<br>Main alloy components<br>Microstructure descr. | min. 57 HRC<br>V, Cr, Ni<br>Martensitic iron-based alloy with<br>primary fine vanadium monocarbide   |

carbides (Cr<sub>2</sub>Cr<sub>3</sub>).

### Nickel-based armoring alloys

#### RP50

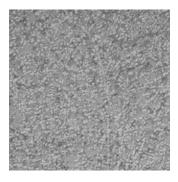

|  | High wear protection with very good corrosion resistance  |
|--|---|
| Hardness at room temp.<br>Main alloy components<br>Microstructure descr. | min. 49 HRC<br>Mo, Cr, B<br>Nickel cobalt base alloy with primary<br>solidified Ni <sub>2</sub> B nickel borides and<br>Mo-Si-C Laves phases.<br>Also eutectic solidified Cr <sub>7</sub> Cr <sub>3</sub><br>chromium carbide as well as Ni <sub>3</sub> B<br>nickel borides. |
| Colmony 56® (nur USA)  | Good wear protection with good  |

corrosion resistance

(VC) precipitate as well as chromium

Hardness at room temp. Main alloy components Microstructure descr.

min. 52 HRC Cr, B, W Nickel cobalt base alloy with primary solidified Ni<sub>2</sub>B nickel borides. Also eutectic solidified Cr<sub>7</sub>Cr<sub>3</sub> chromium carbide as well as Ni<sub>3</sub>B nickel borides.

#### Colmony 83<sup>®</sup> (only USA)

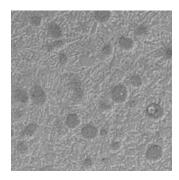

|  | Highest wear protection with best corrosion resistance                                   |
|--|--|
| Hardness at room temp.<br>Main alloy components<br>Microstructure descr. | min. 50 HRC<br>Cr, W<br>Tungsten carbide dispersion<br>hardened nickel-chromium-tungsten |
| Microstructure descr.  | 0 1  |

### Cobalt-based armoring alloys

#### **RS12**

Optimal wear and corrosion protection at high temperatures

| Hardness at room temp. | min. 45 HRC                       |
|------------------------|-----------------------------------|
| Main alloy components  | Cr, W                             |
| Microstructure descr.  | Dendritic cobalt base matrix.     |
|                        | Eutectically precipitated mixed   |
|                        | tungsten and chromium carbides in |
|                        | the spaces between dendrites.     |

#### **Base materials**

| Material                                | Mate-<br>rial no. | R <sub>p0,2</sub><br>(in Mpa) | R <sub>m</sub><br>(in MPa) |
|---|-------------------|-------------------------------|----------------------------|
| 31CrMoV9                                | 1.8519            | 780                           | 850                        |
| X35CrMo17-1                             | 1.4122            | 600                           | 800                        |
| NiCr22Mo9Nb                             | 2.4856            | 425                           | 870                        |
| X38CrMo16                               | 1.2316            | 600                           | 800                        |
| <b>42CrMo4</b> (AISI 4140 – only USA)   | 1.7225            | 500                           | 750                        |

# **Design** Screws with armored flights

By employing a PTA built-up welding, we apply our highly wearresistant armoring alloys before the machining the geometry. This also protects the web edges – a very good wear resistance and thus a long service life results.
