## KA Series

Models: KA04

KA07 KA012 KA110 KA145 KA350

The KA system is a negative pressure pneumatic evacuation system for clean and quiet continuous evacaution of regrind from our granulators. It features a hermetically-sealed cartridge filter system with automated pulse-compressed air cleaning to keep the filters clean and system operating efficiently.

## **Standard Features:**

- Designed for continuous conveying of regrind with filtered air release to ambient room;
- Includes a rotary air lock to create vacuum system
  - Rotary air lock gently drops material from cyclone discharge for cleaner operation
  - Material never passes through blower, so material is not degraded and system is quieter material is not degraded and system is quieter
- Compact system as blowed iss mounted on top of filter chamber;
- Filter system has automatic timed pulsed compressed air cleaning of the cartridge filters to keep the system operating at maximum efficiency. Filter cartridges which are easy to access and replace;
- Robust and compact modular structure which can be adapted to any plant layout;
- Accessories: antistatic bars, DPM mearsurement; and
- Automatic or independent operation or integrated control panel with granulator.

KA12, KA110, KA145, KA350
